COMMONWEALTH OF PENNSYLVANIA

FOURTH ANNUAL
STATISTICAL REPORT

of the

Department of Welfare

CHARLES I. ENGARD

Secretary

1938

Bulletin No. 78

Digitized by the Internet Archive
in 2016

With costs increasing to maintain children, the aged, the mentally ill, the feeble-minded, the epileptic, the physically ill, and those committed for law infractions, governments are today devoting more attention to statistics of their institutional populations costs.

During the last several years, the government of Pennsylvania has become more curious with respect to its wards. The only means available to base its studies which will enable it to intelligently and economically plan its future requirements can be found in data related to similar periods each year.

In the pages following the most exhaustive statistics relative to institutional populations have been assembled in the clearest form to enable those interested in governmental affairs, particularly those concerned with hospital, penal and correctional, or other institutional populations, to explore Pennsylvania's experience in the period covered by this Fourth Annual Statistical Report of the Department of Welfare.

Charles I. Engard
Secretary of Welfare

The Fourth Annual Statistical Report of the Department of Welfare is compiled for all those who are directly or indirectly interested in its problems.

It is fully realized by students of penology that respect for the law cannot be determined by the number who remain out of penal institutions, nor, conversely, disregard for the law be measured by the number of arrests and convictions. Likewise the number of mentally ill cannot be ascertained by adding the populations of the various mental hospitals.

Nevertheless it is believed that the material contained in this report is germane, is invaluable as general barometric data and can be used as a measure and as an analysis of the multitudinous intricacies of the social problem of this Commonwealth.

LeRoy C. Schaeffer

BUREAU OF COMMUNITY WORK

The tables presenting the population of county homes as of December 31, 1937, are of particular interest in view of the fact that on January 1, 1938 the administration of these institutions was transferred from the Directors of the Poor to the County Commissioners.

Will these figures show material changes for the calendar year 1938?

Will the changes be significant?

As might be expected we note for 1937 a decrease of almost 8 percent in the number admitted to county homes because of old age, which may mean that the provision for Old Age Assistance has been helpful. On the other hand, the number of chronically ill admitted has increased almost 8 percent and the total of feeble-minded and insane cared for in these institutions shows an increase of nearly 16 percent when compared with 1936. Might this indicate a tendency on the part of the county to provide care in institutions for the mentally and physically needy, while those who are economically indigent can secure other help?

Significant also is the fact that while the data for the age groups show a decrease of 8 percent for those 70 years old and more, there is a slight increase in admissions of guests 50 to 70 years old. It is interesting, too, that of those with no education almost 29 percent fall in the age group of 70 and more. The statistics indicate 63 percent of college educated persons found in the county homes are more than 60 years old. Does this perhaps indicate difficulty in adjusting to modern methods? What might the previous history of their care have been?

A complete saga is embodied in the fact that on December 31, 1937 there were 40 percent more children living in county homes than on December 31, 1936. This in spite of laws and special efforts with Directors of the Poor. Of the 146 children in institutions in August, 1938, it is most encouraging that only 29 children were admitted during that month, and that the majority of those admitted in August are feeble-minded, according to the records of the Bureau of Community Work. It is to the credit of the field worker in this Bureau that through untiring efforts and constant pressure on home officials that the old situation has been improved.

Statistical tables can yield almost any information one desires and it is virtually impossible to touch lightly on these for the county homes without developing a thesis. It is gratifying to note that a larger percentage of county homes have reported for 1937 than heretofore and that so much information has been secured. Again, these tables for 1937 will be especially significant for succeeding years.

In studying the statistical tables analysing the populations in the three correctional schools it must be remembered that this includes only one State-owned and two State-aided institutions, while there are 19 other institutions in the Commonwealth caring for delinquents. This accounts for the fact that Luzerne County shows a total of 88 girls placed, but no boys. They use their own county-supported correctional school for the boys. Similarly, we cannot assume that Cameron, Forest, Juniata and Sullivan Counties are without juvenile delinquency problems. They, too, are making other

provisions for their care. A slight increase in admissions is noted which may or may not be significant, but why is an increase in commitments by alderman and justices of the peace indicated? Do we need further education along this line?

These tables should be taken at their face value only, for the whole basis of admissions and releases from these three schools is not at all comparable. This is a picture, perhaps meaningful, of the statistical situation in each school. What the relation of the statistics is to each other and to the various classification may require an understanding of the situation in each school. A careful study gives a most telling picture in human situations. For instance why does a child 19 years of age of first grade in school rating happen to be placed in a vocational training school? Is this one of society's mistakes of 10 or 12 years standing? Is the "juvenile delinquent" responsible for his delinquency and what will vocational training planned for normal students do for him?

The tables on race and parentage are significant to students of sociology and tend to break-down the catch phrase of the street: "it is the foreigners who fill our jails and correctional schools."

Every individual interested in his own community should study these tables with a view to using them in facing the problems of his own immediate group. What do we need? Are we meeting these needs with out-dated methods and neglecting possible resources available for the education of our future citizens?

Rosemary Reinhold
Director
Bureau of Community Work

STATE INSTITUTIONS

FOR
MENTALLY ILL
AND
MENTALLY DEFICIENT
INCLUDING DIXMONT & ELWYN

POPULATION

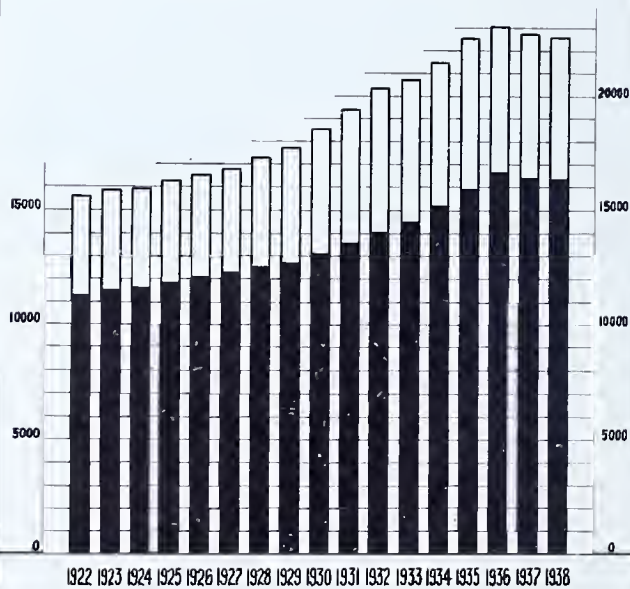

MAY 31

1922-1938

DISEASED

DEFECTIVE

BUREAU OF MENTAL HEALTH

The following statistical tables by no means represent all the information available in the Department of Welfare regarding mental patients in State-owned and licensed County mental hospitals in Pennsylvania. These tables, however, illustrate the extent of the problem and form a basis for comparison with similar activities in other States.

Although the extensive building program has been progressing favorably, additional accommodations in the mental hospitals, institutions for mental defectives at the Selinsgrove State Colony for Epileptics, were not completed during the biennium. As a result, applications for the admission of patients have continued to be scrutinized more carefully than in former years.

The occasional effort to commit old persons unnecessarily to mental hospitals has been discouraged.

Inebriates, as such, have not been accepted. Whenever it has been possible, arrangements were made to return to the community suitable patients no longer in need of mental hospital treatment, so that vacancies might be made for the admission of urgent cases. In this way, the State-owned mental hospitals were enabled to close the biennium with fewer patients than were under treatment at its beginning.

Examination of the table on Movement of Patient Population will moreover show that a creditable number of Patients were discharged as recovered or improved, and a considerable percentage of these were on parole at the end of the period.

It will be noted that statistics referring to county mental hospitals, as usual, have been included. At the time of this writing, however, Act No. 21 of the Special Extraordinary Session of the General Assembly of 1938, establishing complete State care for mental patients, has passed, and the Philadelphia Hospital for Mental Diseases at Byberry, had become the Philadelphia State Hospital, under complete control of the Commonwealth. The other county institutions are being studied as to their suitability for State hospital purposes. The constitutionality of Act No. 21 is being tested.

If the complete State care act is upheld, subsequent statistical tables will be greatly simplified and will be much more comparable with those of other States.

At present, there are some differences between State-owned and County hospital tables. For instance, there are about twice the number of senile cases admitted to County institutions than to State hospitals.

All the tables are worthy of careful study and one is tempted to make various deductions, many of which however, might better be based upon a series of biennial reports.

Per capita costs continue to be very moderate as compared with those in neighboring large States.

As suggested in the Third Annual Statistical Report, "more liberal budgets expended with conscientious care, would undoubtedly bring about even more satisfactory results."

William C. Sandy, M. D.
Director
Bureau of Mental Health

STATE INSTITUTIONS

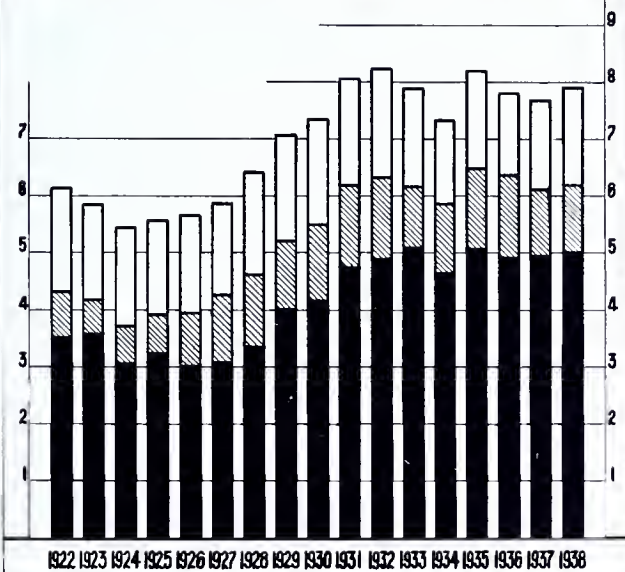

PENAL AND CORRECTIONAL

POPULATION

MAY 31

1922-1938

PENITENTIARIES 
CORRECTIONAL SCHOOLS  INDUSTRIAL SCHOOLS 

BUREAU OF CORRECTIONS

The Bureau of Corrections herewith presents statistical data collected from State penal and correctional institutions, together with charts with respect to the 67 county prisons of the Commonwealth.

A definite line of demarcation will be noted in the compilation of the data pertinent to the reports on crime statistics. The first part of this report treats with State penal and correctional institutions, while the second part includes the 67 county penal institutions.

As will be noted, there is an increase in the number of charts and reports compiled herein as compared with the Third Annual Statistical Report of the Department of Welfare.

Among the several significant factors which resulted in greater scope of the studies the following might be mentioned:

- (a) The increasing interest in penal affairs.
- (b) The result of an increase influx in commitments to those institutions.
- (c) The desire of the Department to ascertain the committing factors of those now incarcerated with a view toward utilizing to the best advantage the increased accommodations resulting from the penal and correctional institution building program, with respect to the housing of the various types committed.

This point is clearly evidenced in the first chart of the report which covers the Movement of Population, State Penal Institutions Fiscal Year ended May 31, 1938. The total number of new commitments during 1938 was 2342, as compared with 2025 for 1937, or an increase of 317.

The total number discharged during the fiscal year ended May 31, 1937 was 2741 while during the year ended May 31, 1938, 2317 were discharged, a total of 424 more in 1937.

This may have a significant bearing. It may have been due to (a) definite decrease in the number of those discharged, (b) a decrease of the number on parole or (c) a decrease in those transferred to other institutions. As will be noted in this same table the number on parole for the fiscal year ended May 31, 1937 was 1831 as compared with 1458 for 1938 or a total of 373 more on parole in 1937 than in 1938.

The number transferred to other institutions as of May 31, 1937, was 274, while in 1938, the number dropped to 254. The same factors are again evidenced in chart 2 of this report, Movement of Population State Penal Institutions - calendar year ended December 31, 1937.

In addition to the above mentioned charts comprising statistics referring to State Penal and Correctional Institutions, there is a chart on page 141 showing the population of State institutions, Penal and Correctional from May 31, 1922 to 1938. Of interest too is the chart on page 307 showing statistics with respect to rehabilitative training in State Prisons for the period

May 31, 1924 to 1938. A definite and marked upward trend is evidenced from the years 1935 to 1938 inclusive.

Finally, relative to State Penal and Correctional Institutions there has been incorporated a chart showing the comparative cost of operating the institutions on a per capita - per diem basis for the years ended May 31, 1929 to May 31, 1938 inclusive.

With respect to State Penal and Correctional Institutions, exhaustive statistics and charts have also been added for County Penal Institutions.

It is the sincere hope of the Bureau of Corrections that the statistical data and charts presented in this report will serve as an improved basis for further constructive programs and enlightenment in effort to cope with crime problems more scientifically.

Ira C. McCloskey
Director
Bureau of Corrections.

PRISON LABOR DIVISION

The fundamental purpose or function of the Prison Labor Division in the Department of Welfare is to reduce idleness; to furnish trade-training rehabilitative work for prisoners incarcerated in Pennsylvania State Prisons; to establish habits of industry instead of crime; to minimize opportunities or reason to riot and to cause disorders, and to reclaim the largest possible percentage of those paroled or released as a useful and industrious part of society.

This Division, nevertheless, operates on a fully self-supporting basis without cost to State taxpayers through the sale of manufactures to State-use markets. In agreement with labor and industry, State laws prohibit sales on the open market in competition with private industry.

The table following shows the various prison industries operated by the Prison Labor Division and the number of prisoners in Pennsylvania State Prisons given trade-training in these industries during the past five fiscal years.

It will be noted that during this period there has been a marked increase in the total number of prisoners so employed, which is in keeping with the purpose of the Prison Labor Division.

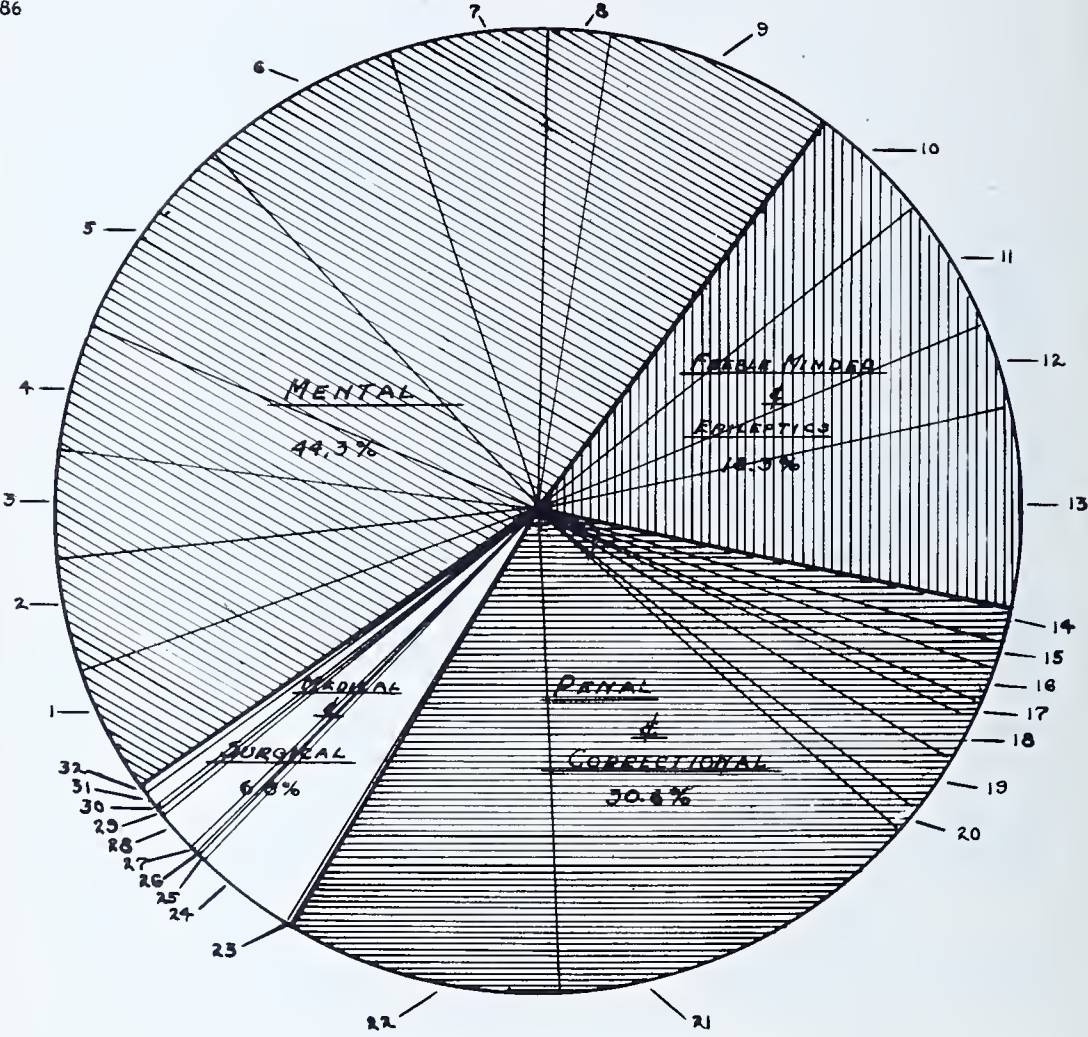

F. Herbert Cooper,
Acting Superintendent,
Prison Labor Division.

BUREAU OF INSTITUTIONAL MANAGEMENT

The Bureau of Institutional Management is responsible to the Commonwealth and twenty-nine state-owned institutions for developing and supervising a program providing clothing, laundry, heat, light, water, farms and general maintenance. Standards or goals of performance are promoted. Key employees are called together for conference on important problems. Monthly summaries of data reflecting efficiency as to food, laundry, farm, hospital, and engineering service records are prepared and issued to all institutions.

Dietary

In Table I are shown the figures for basic ration and the data indicating performance at the several institutions covered. The ration is an estimate of the needs of the institution. It is used as a yardstick in judging the adequacy of the institutional food consumption. Figures are based on the total number of people fed. Variations in consumption are due chiefly to differences in the production. Items 8 and 10 and 13 to 16 inclusive, and part of 1 and 18 are raised on institutional farms.

Considerable difficulty is experienced by dietitians and others concerned with the administration problems as to food in meeting the needs of patients or prisoners, and at the same time remaining within budgets. Reduction in farinaceous foods are relatively unimportant, but reduced consumption in the protective foods, such as butter, eggs, milk, fruit and vegetables is not desirable. Canning activities are of increasing great assistance in reconciling food needs and budgets.

Farm

Institutional farms comprise more than 25,000 acres of land, which is the area surrounding the 17 institutions maintaining farm activities. This area provides the respective institutions with protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from the budget available.

Table II shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the assumption that the following products in order, should be produced to the extent that land and other facilities are available; vegetables, potatoes, crops to support the dairy, piggery, hennery and horses.

After such tilled crops are provided for, or to the extent that tilled land is available, the remaining acreage is planned and maintained for pasture and woodlots.

Employment of patients or inmates is also shown. A total of 1,528 persons are employed in farm activities, with the larger proportion working with the general farm crops and in the gardens. Employment in livestock activities has a very definite and particular value for certain individuals.

In Table III the production of products per capita per day is shown. It will be noted that at the majority of institutions goals are being met as to the production of milk and vegetables. Farm planning from year to year should enable those that are low to approach

more nearly the desired goals. Inadequacy of buildings and other facilities limit, in a number of cases, livestock production.

Table IV shows efficiency of production by farm activities. It will be noted that institutional results are considerably above State averages. Institutional production could not be considered efficient if this were otherwise. The production of the 16,667 pounds of milk per cow at Rockview during last year leads all other herds, and is outstanding.

In eggs, the production of all of the first five institutions exceed 200 eggs per bird. In 1929 three institutions exceeded 10,000 pounds of milk per cow, and in 1938 all herds exceeded that production. In the henery production for 1939, three flocks exceed 150 eggs per bird while in 1938 none fell below that figure.

It should be noted that with the increased production per cow and per hen, the total amount of milk is almost double that of ten years ago, while the eggs virtually treble the production of that date. Marked improvement is also evident in the general crop production as shown by the index figures.

Table V shows in part some of the factors to be considered in farm planning. It is important that the flow of milk from the dairy to the Dietary Department be rather uniform throughout the year. Therefore an effort is made to adjust the number of cows freshening each quarter of the year to such a program. The achievement of that goal is affected by the periods between freshening, or the calf interval.

Twelve months or less is the aim. Cows that live long, ward hard, and are vigorous enough to stand the strain is the desire of all herdsmen. Few there are that live to produce 100,000 pounds of milk.

That there were 58 cows of that quality and stamina in institutional herds during the past year speaks well for the cows as well as the herdsmen.

In Table VI are shown acreage and yields for general farm crops. Every acre of institutional land is planned. After vegetables and potatoes are provided for in accordance with the needs of the institution, the remainder of the land is planned to produce crops needed for the several livestock activities. Every effort is made to maintain or increase fertility and therefore yields.

Laundry

Table VII compares the average of the first five bundles with the eleventh. It will be noted that perceptible improvement is shown in breaking strength loss and in the retention of whiteness. Very marked improvement, 26 percent, or an improvement of more than one-half better than in the first five bundles - is shown in soil removal. This improvement was evidently due to arrangements made by the Department of Textile Chemistry of the Pennsylvania State College under a plan financed on a fee basis through a cooperative effort with Department of Welfare institutions and those under the Departments of Public Instruction, Health, and Military Affairs.

The improvement has been obtained with virtually the same equipment that was used during the last two years when the first five test bundles were run.

This increased efficiency, therefore, has been achieved through the more effective use of all supplies, equipment and general laundry practice. The better quality of work done bears importance not only because of the value of greater efficiency in itself, but also because the work of the laundry relates so closely to the care of patients, satisfaction of employees and general appearance of clothes and linens.

Hospital Services

Hospital services at the 10 Medical and Surgical Hospitals, operating under the Department of Welfare, are indicated in part in Table VIII. The services indicated are inextricably entwined with the skill, interest, and many hours of service of the surgical staff and the medical and attendant personnel.

Adequate personnel as to number and qualifications continues to be a perennial problem. The construction program under way promises many facilities heretofore urgently needed.

Engineering

The Engineering activities cover all of the many and varied maintenance problems as are presented by the 29 Welfare institutions. These activities include water supply, sewage treatment and disposal, boiler and power plant operation, refrigeration, heat, light, etc.

Table IX presents the annual per capita costs for the purchase of the basic maintenance commodities, while Table X presents the per capita consumption of these commodities.

It will be noted that coal is the largest single item consumed. The use of coal to provide steam is the backbone of the institutional existence. Expenditures for coal may be translated into the generation of electricity, refrigeration, heat, laundry, sterilization, hot water, cooking and farm activities.

Construction

The completion of the largest construction program ever undertaken in the history of the Department is approaching. This program has become a reality through the fine cooperation of the General State Authority and the Federal Emergency Administration of Public Works.

The study of the various institutions necessary in the preparation of the construction drawings, has shown that, even though the present program will greatly improve the conditions existing at the various institutions, further construction and the replacements are required. The period of time through which the various institutions previously had to exist without funds for improvement or replacement of aged and unsafe buildings, together with the increased population demand, makes the continuation of the construction program mandatory. Advancement in the methods of treatment and operation of the various institutions necessitates continual improvement adjustments and rearrangement of buildings and services.

The Department of Property and Supplies has greatly assisted this readjustment and improvement through the awarding of contracts amounting to approximately \$923,100 for the elimination of fire, panic and other hazards existing at the various institutions. Here again, in order to comply with the requirements of Act 88-A, and

to eliminate many other hazardous conditions, this program must be continued. Many hazardous and unsafe conditions were found to exist in places not conceived at the time of making the original appropriation, and only through the continuation of the construction program can the institutions of the Commonwealth attain to the standards recognized and recommended throughout the Nation for safe, modern, and economic operation.

Table XI summarizes certain data relative to this very remarkable program of construction. The comfortable capacity indicates the population by institutions for which existing and new buildings have been planned. At present most institutions are overcrowded.

The number of new buildings, additions and cubic feet include construction for the many and varied functions required such as ward buildings, kitchens, dining rooms, laundries, boiler and power plants, sewage disposal, farm and other construction. The cost per cubic foot as given cannot therefore be used as an accurate measure for any one function. It is of definite interest and value, however, for general consideration.

R. Bruce Dunlap

Director

Bureau of Institutional Management.

Polk	12,775	12,488	-	-	136	208
Selinsgrove	-	14,284	-	265	94	111
Total Production	7,749,309	14,566,267	701,384	2,199,517		
Averages	9,222	12,098	122	199	112	169

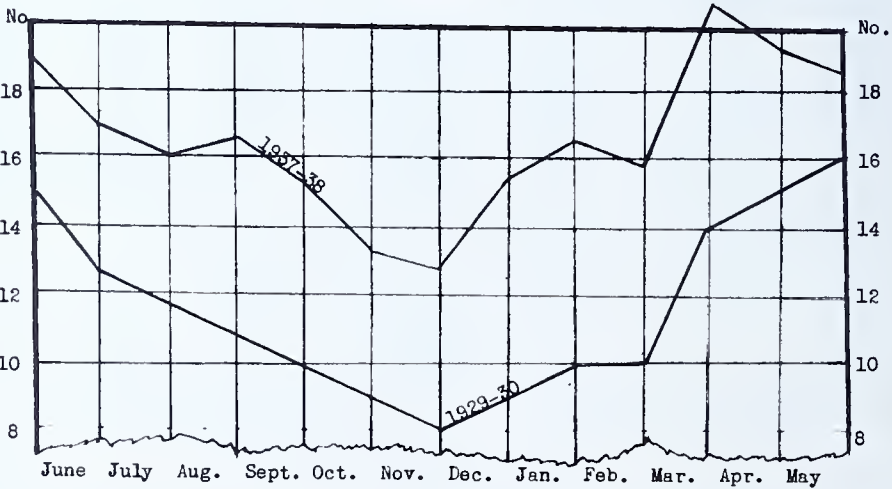

* Crop Index by Institution: Figure indicates number acres average farmer in same county required to produce crops grown on 100 institutional acres. Crops included are corn for grain and ensilage, oats, wheat, hay, potatoes and barley.

Milk per Milking Cow per Month

Production - Total Pounds Milk per Cow-
Year Ending May 31, 1938 - 12,098
Year Ending May 31, 1930 - 9,564

Eggs Per Hen Per Month

Production - Total Number Eggs per Hen-
Year Ending May 31, 1938 - 199
Year Ending May 31, 1930 - 140

The above graphs indicate the production of milk per cow and the eggs per hen for the years ending May 31, 1930 and 1938. The total pounds of milk include all cows in the several herds and the total eggs include all birds in the laying flocks.

STATE COUNCIL FOR THE BLIND

In presenting the statistical information on the pages following, the State Council for the Blind believes that a brief narrative account will enable them to present more adequately the story it is designed to tell.

In following up the responsibility placed upon it by the law creating it, the State Council for the Blind has made a survey of blind persons, county by county, until the whole State has been covered. In 1925, it was estimated that the probable total number of blind persons in the Commonwealth was approximately 6,000. Today, the Council's register of the blind carries the stories of 15,959 persons who are blind within the generally accepted definition of blindness, a visual acuity of 20/200. This number is a proportion of one to every 602 of the State's population and while this is the average proportion for the whole State, there is a wide variation among the counties.

To learn the reasons for this, a careful study has been made of the causes of blindness of a large proportion of the blind population and a table is presented covering the findings of this study. One of the facts which stands out clearly is that a large percentage of our present blind population are blind from remedial causes, while a still larger proportion are blind from failure to secure the right sort of ophthalmologic service in the early stages of the disease which has caused their blindness. A program has been developed to set up facilities which in time

will, undoubtedly, reduce the Commonwealth's blind population at a very considerable saving to the tax-payer.

Additional funds, of course, will be required to set up and administer such a program but the use of funds for this purpose will be in the nature of an investment rather than an expense and the results obtainable will show an excellent return on the investment in terms of dollars and cents added to the humanitarian values.

In presenting the table showing the operation of the employment program for the blind in news and refreshment stands, attention is invited to the fact that this program is set up in cooperation with the Division of Vocational Rehabilitation of the Office of Education, Department of the Interior, Washington, under the provisions of the Randolph-Sheppard Act passed by the Congress in 1936. The statistics submitted tell for themselves the story of just what this employment program has done for those blind men and women to whom the Council has been able to extend its services with its present staff.

The extension of this program again requires additional funds since the success of the operators depends to a very large extent on the adequacy of the supervision which may be given them so that they may successfully operate their business ventures.

Because of the wide-spread interest in the Seeing Eye guide dogs, we have included a report on the blind men and women who have

been provided with these thoroughly satisfactory and safe guides through the services of the State Council for the Blind. Indicative of the value of this service is the number of blind Pennsylvanians experiencing the freedom and independence which the guide dogs provide. With 73 dogs in the Commonwealth, Pennsylvania has more than twice as many as any other State in the Nation.

S. Mervyn Sinclair
Executive Director
State Council for the Blind
